

DA-Desk × Sedna Integration Guide

Overview

The DA-Desk and Sedna integration allows you to view DA-Desk insights directly within the Sedna platform. By embedding DA-related information into your email workspace, your team can improve visibility and decision-making speed without switching between systems.

Key Benefits:

- Unified Workflow: Access DA-Desk data inside the Sedna widget.
- Efficiency: Reduce manual data lookups and clicks.
- Persistent Login: Sign in once and stay connected across sessions.

Getting Started

To enable the integration, we require the following information from your organization:

- Sedna Tenant Address
 - For example, if your Sedna address is <https://yourcompany.sednanetwork.com>, we require the "yourcompany" portion of the URL.
 - *Legal Entity Details: If this address is shared among multiple legal entities within your organization, please provide the names of the specific entities to be included.
- Administrative Contact: The person responsible for Sedna configurations.
- IT Lead: A technical point of contact (if applicable).
- Preferred Approval Thresholds

**Note: For any clarifications related to multiple entities within the integration, please reach out to your Customer Success Manager for assistance.*

Marcura will provide you with:

- Secure Integration Credentials: Your unique API key.
- Connection Details: Specific Webhook URLs for your environment.

Enabling the Integration

The setup is a straightforward two-step process:

Step 1: Marcura Configuration

Our team configures the backend connection to ensure your DA-Desk environment recognizes your Sedna tenant.

Step 2: Sedna Configuration

Your Sedna administrator will:

1. Add Marcura Disbursements as a "Connected App"
2. Enter the Credentials provided by Marcura.
3. Enable the DA-Desk Widget for the user.

User Experience

- First-Time Access: When a user opens the widget for the first time, they will see a "Login" prompt to authenticate via Marcura.
- Automatic Loading: Once signed in, the widget will automatically load relevant DA data for approvals based on the email context.

Standard Configuration

DA-Desk currently supports variance-based approval thresholds and ageing DAs visibility which can be enabled as part of the integration setup. If your organisation requires bespoke approval logic, Marcura will review the requirements and advise on next steps.

Support

- For questions related to DA Desk functionality or data, please contact your Customer Success Manager.
- For questions related to Sedna configuration or access, please contact your Sedna support team.
